# Fall-2022-Catalog-Order-Form

# **Nepheline Syenite Buy-The-Ton ORDER FORM**

**Not a stock certificate, but actual ownership of an In situ TON**

**On TABLE MOUNTAIN, Lincoln County, OR, Book 370, Page 463-94**

**US BLM Claims: Nepheline 1-32, ORMC 151343-3741**

**As represented by ECO-Mining-Milling L.com Limited Cooperative Association LCA**

**This is a simple agreement between an individual (Barry Murray) Bill of Sale to the individual (listed below) in a non-corporatist security transaction, to purchase a legal in-place, of a uniform value Al<sub>2</sub>O<sub>3</sub> / SiO<sub>2</sub> Nepheline Syenite ton(s) which when mined and milled properly may be sold as FoamKrete™!**

**The explanation as to why this geologically unusual, previously unknown, historical natural, un-patent protected Pozzolona needed to replace a known greenhouse gas producing “roasted” Portland® cement, often used with a manufactured Coal Ash public relations experts have falsely colored as going, “Green”, looking to benefit from carbon credits, something only a natural zero carbon cement can claim— is why the flow-through of FoamKrete™ > when processed by contract by a separate ECO-Mining-Milling Limited Cooperative Association LCA, on an “All on site expenses” plus a 10% Royalty, collected at the mill site, or leaving Lincoln County, Oregon > as a wholesale priced FoamKrete™ bound for a collective distribution center > close to an ECO-American-Housing solar off-grid building site.**

**Other individual royalties, as 2.5% per ton going to claim owner Barry Murray, and 2.5 % to the original individual risk taker who automatically became an individual Foamkrete™ Dealer, with voting rights. As this Mining Law of 1872 Association program would be against SEC securities law favoring big corporate, often foreign multinational, control, we cannot bundle the purchase of a raw material, with the manufacturing of a product in yet-another stock promotion.**

**We are suggesting a royalty lien holder of a mineral asset more valuable by the mined ton on many precious metals take advantage of making a down payment on a turn-key services contract, where for once the “un-qualified investor” can use his “inside trader” advantage to convert his flow-through ton of an ECO-Building-Materials.com catalog, into a physical (not pieces of paper, or bit of electronic credits) ROI many times over that of playing a day trading yo-yo game — which has nothing to do with covering the long term basic survival needs of everyday people. The simple way for management of your own retirement is to double the payment for a ton, by making an equal (at this time) down payment**

**If you wished to double dip your 2.5% royalty into a ECO-Mining-Milling Limited Cooperative Association LCA retirement earning a 10% return, then talk, again, to Lucas Ponce de León, about buying needed mining equipment to process your ore, as a “Patron” investor.**

**This is the protected part of a FoamKrete Bill of Sale Form, along with a ECO-Mining-Milling Limited Cooperative Association Contract Agreement. Due to the intentional chaos happening unchecked on the Internet, signing up to be a part of an ECO-GoGreen-FoamKrete™ Team (a newsletter), we prefer the Identity (to verify the qualification of being an individual buyer) on this protected page be printed out and sent by USPS, along with a personalized check or money order to:**

**Barry Murray, POB 1198, Castle Rock, WA 98611.**

**One advantage in doing so is the built-in protection of a USPS Postal Inspector whose jurisdiction includes bring an old-fashioned “wire fraud” to a court. Something that has not been shown to date in some on-line “actions” controlled by the FTC, FCC jurisdiction, which seems to favor what used to be recognized as anti-trust violation that has created such an awareness gap that consumer / workers somehow are pointed out with confusing shame for voting the wrong way?**

**Example? How about individuals working together to fix the “homeless” problems where politicians with a “flapping lip” promises are only contributing to our pollution problem. And the fake news Internet misdirection and phishing with copyright protected content , or the outright theft of stealing e-mail returns, without explication, by ever-changing hacker tricks. If you would rather pay through PayPal invoice, see if the submit button will work for you.**

**I understand the attached terms and conditions. Enclosed is a printed, signed, form, & check or money order to:  
 Barry Murray, ECO-Mining-Milling, POB 1198, Castle Rock, WA 98611  
 To send a saved E-Form to receive a PayPal Invoice— MailTo: FrontDesk@MiningMagazines.com  
 — which is the guarantor of this transaction— this required acknowledgment of the rules.**

**I understand and acknowledge this Table Mountain Nepheline Syenite Order Form as a 'Plain English' Bottom-Line Explanation of a shared CO-OP Money Flow, and an historic prospector's royalty payment system known as "working a miner's lay".**

1) The legality of this transaction is based upon a legal contract between a US Department of the Interior, Bureau of Land Management Mining Claims administration, and mining claim holder Barry G. Murray, also known on-line, since 1997 as TheProspector for having over 60 years experience in "the field".

2) The authority of managing what SCOTUS has deemed un-patented mining claims as 'real property' which still applies even though the procedure to patent a Mining Law of 1872 mining claim Act (the same process used in the 1862 Homestead Act) which was taken away by President Bill Clinton's moratorium on patenting claims October 1, 1994.

3) Know that my original Nepheline Association Placer Claims had to be replaced by filing Nepheline Lode Claims on June 20, 1996. See my due diligence file for up to date documents required by the State of Oregon, The BLM, and Region Six of the USFS. But, the precedent of miner's working together as an Association still prevail. And, reclaiming as Lode Claims, was a good choice as mining camp case law concerning following ore underground from an apex was beneficial, for describing how underground proven values might not be measured by just claim posts upon the surface. And that in many places follows ownership under private property that do not have recorded mineral rights.

4) Other "authorities" concerned with complying with the codified Mining Law of 1872 — known for a historic 'Prudent Man Protection— includes a Letter of Intent USDA/USFS notification concerning the cutting down of USFS (1905) tress. Zero. Or clearing soil down to a historical bedrock, as mentioned in 36 CFR 228, Subpart A, and the commercial license for safe use of logging roads— includes MiningMagazines.com, and WesternMiner.com/SisuliaMiningDistrictNews.

5) The importance of following historic laws — many simply ignored by big business— is to avoid any sort of Securities Exchange Act of 1934 fine for apparently not being, (a) an insider "qualified investor" with a million or more net worth, (b) or that media aware "widows and orphans" were further protected by not qualifying for a Reg D exclusion when it came to very on-sided IPO politics, (c) which favors monopoly oil qualifying for a "natural resource depletion allowance" , while (d) ignoring that multinational mining is not paying any royalties to US citizen owners of our mineral resources.

6) So, the following is an easy to follow agreement that records the individual sale of an in-place, underground ton of ore, well below market price. And since courts have held passing ore along as a security, instead of controlling a corporations output, FoamKrete.com is backing an equal to per ton purchase down payment contract where the individual owner of said ton makes an equal value installment to a third party ECO-Mining-Milling Limited Cooperative Association on an "All per ton operating costs , plus a 10% royalty profit.

7) An FoamKrete approved ECO-Mining-Milling Limited Cooperative Association LCA, Down Payment Contract for the Mining & Milling of Qualified & Proven Uniform Value Table Mountain, Oregon, Nepheline Syenite In-Place Tonnage, in an Bill of Sale and Registered Owner's Assigned Numbered Tonnage Certificate numerical order dictates the order that underground ore shall be mined and milled. In some places of conflict, the resolution will be solved on alternating numbers and dates.

8) As Barry Murray's offer is really a small business person set-aside, and he retains the veto power to prevent any hostile corporate takeovers, questionable applicants guilty of trying to quash forward momentum may be rejected and fully reimbursed any monies spent in good faith.

9) Please certify on the form that you have done your homework to the point of understanding that a single ton owner, for safety sake, and insurance purposes, is not permitted to interfering with the designated manager of the BLM managed physical claims operator ECO-Mining-Milling Limited Cooperative Association LCA. If you would like to ask the U.S. Forest Service for permission to cut down trees to surface mine their layer of mineral soil, you of course as an independent, have the right to apply — and good luck with that.

10) All parties of this 1) BILL of SALE 2) MINE-MILL 3) MARKETING CHOICE contract need to have done their due diligence directed on-line through hundreds of pages of documentation available through following search engine listed MiningMagazines.com links to a web ring of a least eight independent magazine titles including TheProspector.com ; [MiningInvestment.com](http://MiningInvestment.com) ; DiversifiedInvestments.com ; WesternMiner.com ; [BarryMurray.com](http://BarryMurray.com) ; [ECO-Minerals-Stockpile.com](http://ECO-Minerals-Stockpile.com) (which is currently looking for expansion funding to explore for and stake new finds on unheard of “new” nano-minerals — contact [ECO-Mining-Milling.com](http://ECO-Mining-Milling.com) Director Sharon Ehlmann. Please understand that everyone involved building what may seem separate empires should work together for a common good future, as who knows what will happen if everyone voted to sell out and retire.

### **For Now, the work a day drill is**

1) Starting with an in-place Per Ton Bill of Sale Receipt from claim owner Barry Murray (or his heirs), that has two liens of a 2.5% gross royalty, one to him, one to you, to be paid to you as a private party individual purchaser upon the wholesale delivery when working with a contracted ECO-Mining-Milling Limited Cooperative Association LCA. This is to guarantee a ROI return for the risk taker, even though the ownership of a TON may have been sold to a second party, or the sales market leader of your choice who wishes to complete the contract payments for finished product delivery.

2) If your choice to opt out of making a contracted down payment to a mine and mill your own registered by certificate number tonnage (difficult to safely do, and would require your own Plan of Action approval by the local USFS forest ranger), know that you can keep “your investment” in a recorded database at MinersExchange.com until the special “start-up” buy-in price of \$50 per ton has risen to a comparable mined and milled market standard as China’s, which at this time is FOB priced at \$300 USD, for a minus -325 milling. Once this retail price has been proven by performance, the special buy-in price of \$50 per ton, will most likely equal the FOB market price from Russia, Iran, Pakistan, Brazil, and Ontario, Canada, quickly reaching \$600 per ton when available.

3) As at this point the “Natural Pozzolin Zero Carbon Cement” formula has only been publicly proven in Rome with the construction of the Pantheon — the largest unreinforced concrete dome in the world. Our in-house FoamKrete experiments as a lime geopolymer formula, producing a super strong concrete “tip-up” which when pumped into reusable wall forms, cures with a pattern (brick; stone; ashlar; shake; lap board, or whatever wood grains desired (except T1-11) siding.

The Chinese, the Russians (in Texas) are already 3D printing affordable housing, which licensed building contractor Lucas Ponce de Leon thinks is unwieldy. He working on demonstrating on the West Coast, a proof of concept DIY housing project (under the umbrella of ECO-Housing-America) which will truly establish the mining and milling cost per ton in a US smarter-better-faster-cheaper concrete system.

4) FoamKrete Tonnage certificate holders have a guaranteed position to take advantage of a matching \$50 per ton position in line down payment — also recorded by certificate number — with an independent ECO-Mining-Milling Limited Cooperative Association LCA, on an “All on-site reasonable operating expenses, including unit amortization on e-mining equipment” plus a 10% royalty to their members, figured on the wholesale price, plus percentages, of each uniform value ton leaving Lincoln County, Oregon by barge, rail, truck.

5) Other royalties paid, on top of the 10% going for production are the 2 owner’s 2.5% (which includes a 2.5% per ton payment to claim holder Bary Murray, and an equal 2.5% (for now) to the first “dealer” (you) of a in-place Nepheline ton. Another 2.5% belongs to whoever is managing a FoamKrete distributorship- which should offer rental equipment for the DIY customer.

6) The whole point of FoamKrete > ECO-Housing-America is avoiding monopolistic out-dated competition that has driven the phrase “affordable housing” into being sardonically crazy laugh. I think our Table Mountain reserves should guarantee that another 2.5% “tithing fund” of will start working on doing away with a required fire insurance on FoamKrete walls, and smart roof; that can withstand a forest fire of 3,000° for four hours; and thanks to a Hydraulic “boat floor” Concrete ability to survive Hurricane and Global Warming “century” floods without rebuilding.

7) Another question which needs to be asked is if Asperger’s Al Gore who lost a presidential election in Florida — and did not drag a whole nation into open battle over questioning ‘voter fraud’ — should be blamed, for not making himself clear in his alt presented An Inconvenient Truth, which began as a flip chart slide show, which was reformatted into a film that won both an Oscar® and a Nobel prize.

One of the consequences of the documentary’s opening line “I am Al Gore. I used to be the next President of the United States”, unfortunately tainted his message. After President George W. Bush, when asked whether he would watch the film, and responded: “Doubt it.” Was followed by an op-ed in The Wall Street Journal criticized “truth” as “a biased presentation to exploit the fears of the public for his own political gain” (the Wikipedia account of all this would actually make a exciting movie)! Such shallow thinking led to the house high waves in a vulnerable Florida.

Where I, as a fellow Asperger’s driven creative business man, as today’s Albert Einstein — Elon Musk, who really enjoys tweaking naughty nero-normals, for not recognizing that our purest Greta Thunberg should be appointed Secretary of the UN. Other climate/business aware doers who wonder “what is this box everyone is struggling to get out of” as dropout Steve Jobs who was fired by Wall Street “suits” from his own company: an 8th Grade cement genius of WW2, Henry J. Kaiser who proved his crew could build a Liberty Ship in a 24-hour day ; Harry Truman; Henry Ford; both Tesla and Edison; Abraham Lincoln; and the real political power of Ben Franklin.

Why I am waisting your time as a “horseback historian” following an information trail through a wilderness, is that I became am very aware of Al Gores’s governmental contribution to developing an “Information Highway” as a wide spread communication defense system, as working right now in the Ukraine— where Putin’s blatant disregard of clean air standards have yet to be controlled.

Unfortunately the “defense of freedom” Internet invention has been loosing, again to multinational deep state control where Hatch Act ,and the Sherman Antitrust Act the U.S. Congress passed to prohibit trusts, monopolies, and cartels from taking over the general market by outlawed contracts, conspiracies, and other business practices that restrained trade and created monopolies within industries. Which, I see as “leave us alone” heros that do not want any subsidies or un-fair tax breaks, as we are already pioneering of the future.
